Meta Llama3.2 is a series of advanced open-source large language models (LLMs) developed by the Meta AI department.

1. Model Scale

Model	Size
llama3.2:1b	1.3GB
llama3.2:3b	2.0GB

2. Performance

Lightweight instruction-tuned benchmarks

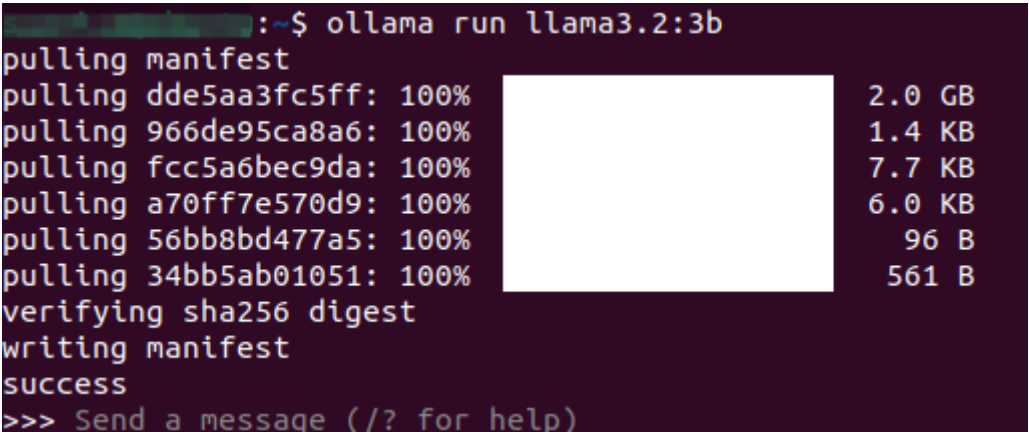

Category Benchmark	Llama 3.2 1B	Llama 3.2 3B	Gemma 2 2B IT (measured)	Phi-3.5-mini IT (measured)
General				
MMLU (5-shot)	49.3	63.4	57.8	69.0
Open-rewrite eval (0-shot, rougeL)	41.6	40.1	31.2	34.5

3. Using Llama3.2

3.1 Running Llama3.2

Use the run command to start the model. If you have not downloaded this model before, it will be automatically pulled from the Ollama model library:

```
ollama run llama3.2:3b
```

3.2 Having a Conversation

How many minutes are there in a day?

The response time depends on the hardware configuration, please be patient!

```
>>> How many minutes are there in a day?
There are 1440 minutes in a day. This is calculated by multiplying the
number of hours in a day (24) by the number of minutes in an hour (60).

24 hours/day * 60 minutes/hour = 1440 minutes/day

>>> Send a message (/? for help)
```

3.3 Ending the Conversation

Use the `Ctrl+d` shortcut or `/bye` to end the conversation!

3.4 Chinese Conversation

If you don't have a Chinese input method, you can refer to the tutorial on switching Chinese input methods.

Chinese conversation:

```
root@kali:~$ ollama run llama3.2:3b
>>> 一个小时是多少分钟，请用中文告诉我。
一个小时有60分钟。

>>> Send a message (/? for help)
```
