

ClawHub

ClawHub is the **public Skills registry for OpenClaw**. It is a free service: all Skills are public, open, and can be viewed, shared, and reused by everyone. A Skill is simply a folder containing a `SKILL.md` file (and supporting text files). You can browse Skills in the web application, and use the CLI to search, install, update, and publish Skills. Website: clawhub.com

Positioning in OpenClaw

By default, the CLI installs Skills to `./skills` in the current working directory. If an OpenClaw workspace is configured, `clawhub` will fall back to that workspace unless you override it with `--workdir` (or `CLAWHUB_WORKDIR`). OpenClaw loads workspace Skills from `<workspace>/skills` and they will take effect in the **next** session. If you're already using `~/openclaw/skills` or built-in Skills, workspace Skills have higher priority. For more details on Skills loading, sharing, and permission control, see [Skills](#).

Target Audience (Beginner Friendly)

If you want to add new functionality to OpenClaw agents, ClawHub is the easiest way to find and install Skills. You don't need to understand how the backend works. You can:

- Search for Skills using natural language.
- Install Skills to your workspace.
- Update Skills with one command later.
- Back up your own Skills by publishing them.

Installing the CLI

Original ClawHub CLI (For International Users)

Choose one of the following:

```
npm i -g clawhub
pnpm add -g clawhub
```

```
root@jetson-yahboom:/# npm i -g clawhub
removed 1 package, and changed 34 packages in 30s
20 packages are looking for funding
  run `npm fund` for details
npm notice
npm notice New major version of npm available! 10.9.4 -> 11.11.1
npm notice Changelog: https://github.com/npm/cli/releases/tag/v11.11.1
npm notice To update run: npm install -g npm@11.11.1
npm notice
root@jetson-yahboom:/#
```

SkillHub CLI (Recommended for Chinese Users) ☆

SkillHub is the Chinese mirror site of ClawHub, optimized for Chinese users, providing high-speed download experience. Visit the website: skillhub.tencent.com

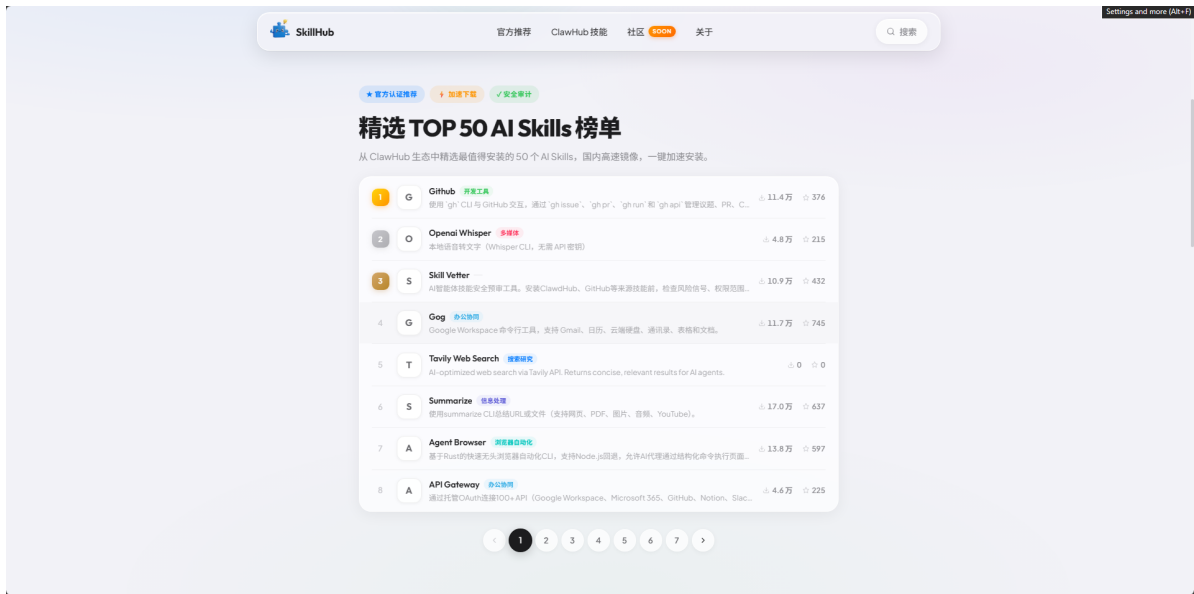

Installation method:

```
npm i -g skillhub
```

Advantages of SkillHub:

- **Accelerated downloads:** Chinese high-speed mirror, no need for VPN
- **Security audit:** All Skills undergo security checks
- **Data synchronization:** Includes 22,000 Skills from the ClawHub ecosystem

SkillHub Mirror Site Introduction (For Chinese Users)

What is SkillHub

SkillHub is the Chinese mirror site of ClawHub. The data source is completely consistent with ClawHub, but it provides a service experience more suitable for Chinese users.

Core Features

- Featured Recommendations:** Officially selected TOP 50 AI Skills, one-click installation
- High-Speed Downloads:** Chinese servers, significantly improved download speeds
- Security Audit:** All Skills undergo security checks to reduce risks
- Convenient Search:** Supports Chinese search to quickly find needed skills
- Real-time Synchronization:** Real-time sync with ClawHub data to ensure latest updates

Usage

SkillHub CLI usage is completely consistent with the original clawhub:

- Search: `skillhub search "keyword"`
- Install: `skillhub install <skill-slug>`
- Update: `skillhub update --all`
- List: `skillhub list`

Relationship with Original Version

- Data Source:** SkillHub's data comes from ClawHub, both have consistent content
- Command Compatibility:** SkillHub supports all clawhub commands and parameters
- Installation Location:** Also installs to `./skills` directory, automatically recognized by OpenClaw
- Switchable:** You can install both clawhub and skillhub simultaneously, use as needed

Logging into ClawHub Account

Why Login

Although ClawHub allows non-logged-in users to search and install Skills, logging into an account has the following important benefits:

- **✓ Avoid rate limiting:** Non-logged-in users may encounter download rate limits
- **✓ Access full features:** Some advanced features require login to use
- **✓ Publish Skills:** Only logged-in users can publish their own Skills
- **✓ Favorites and comments:** Can favorite liked Skills and post comments
- **✓ Usage statistics:** View your own usage situation

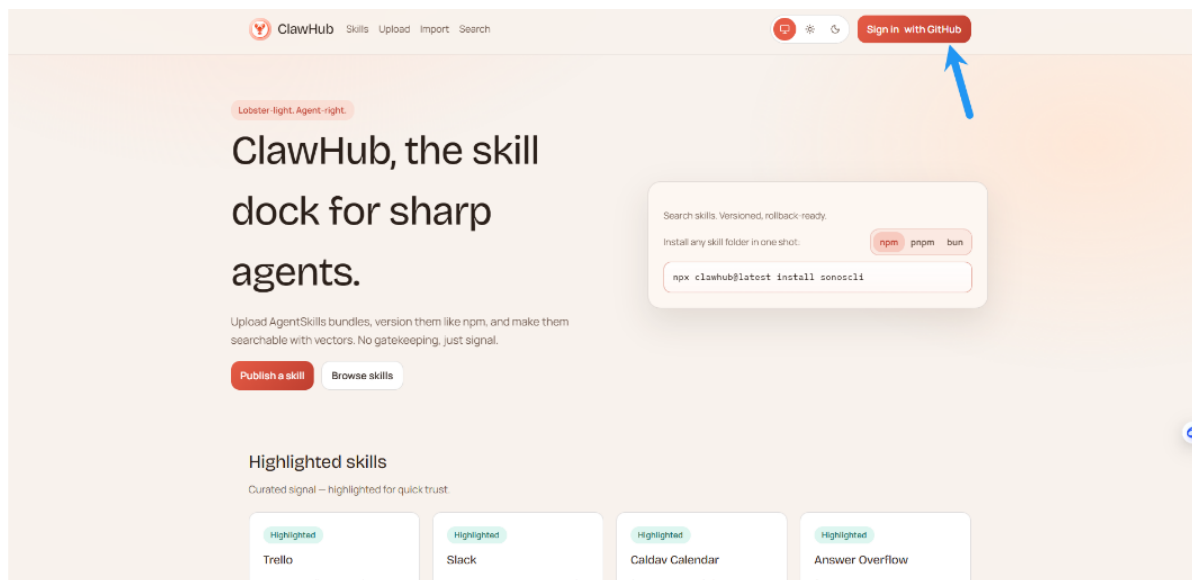

Login Steps

Method 1: Login via GitHub (Recommended)

This is the simplest and most secure login method.

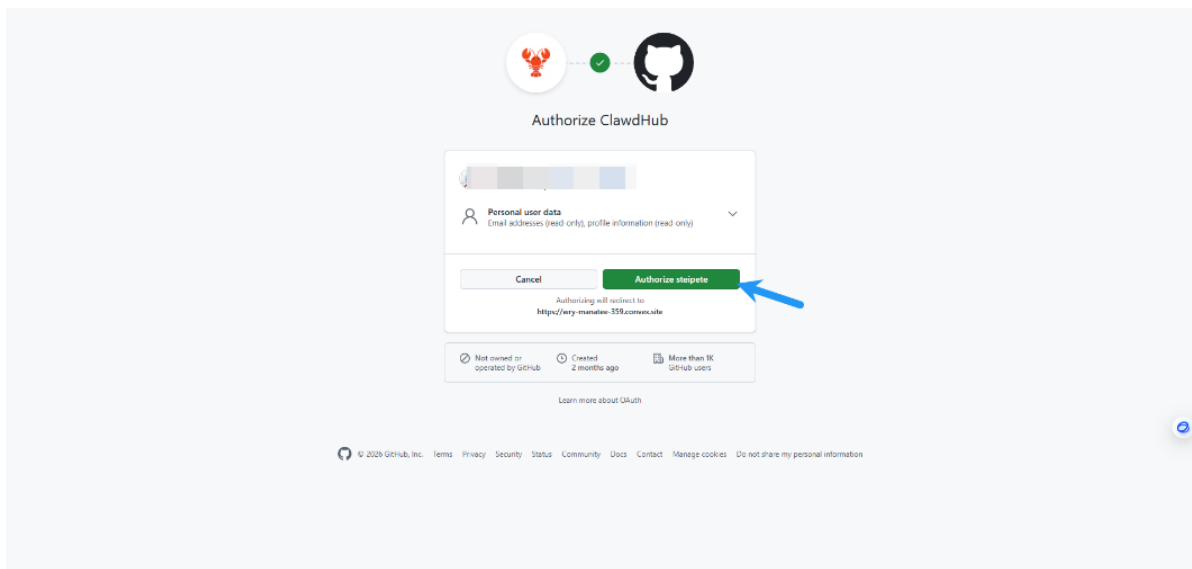

1.1 Visit ClawHub Official Website

Open in browser: <https://clawhub.com>

1.2 Click Login

Click the "Login" button in the top right corner of the page:

1.3 Choose GitHub Login

On the login page, click "Sign in with GitHub".

1.4 Authorize Access

After successful authorization, you will be automatically redirected back to ClawHub and show logged-in status.

Method 2: Login using Token

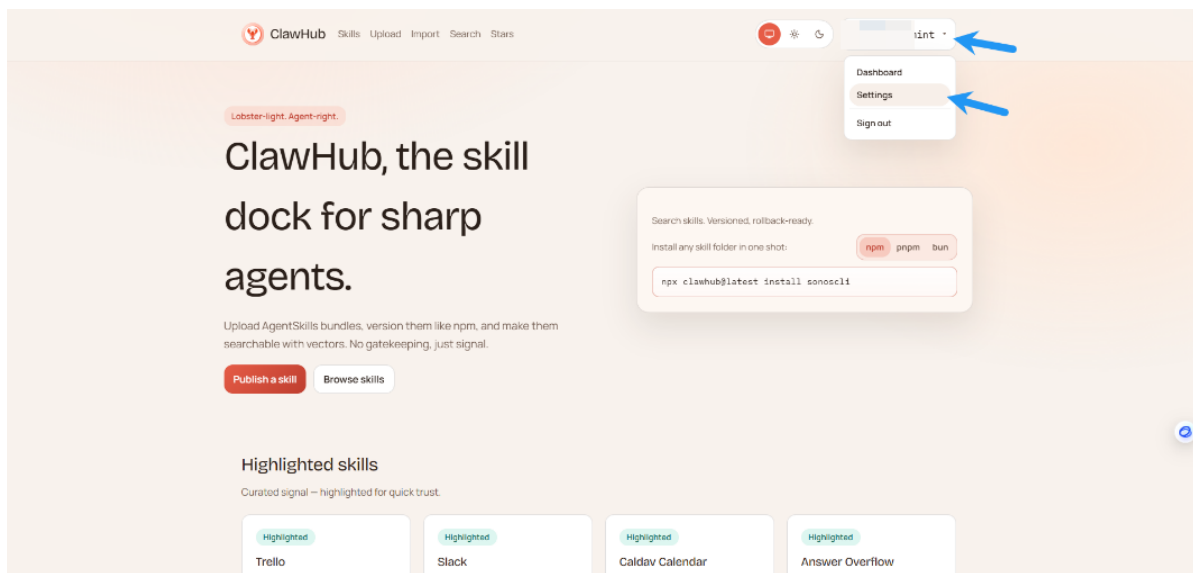

If you cannot use GitHub login, you can use Token login.

2.1 Login Account

First follow the steps in Method 1 to log in to ClawHub official website via GitHub.

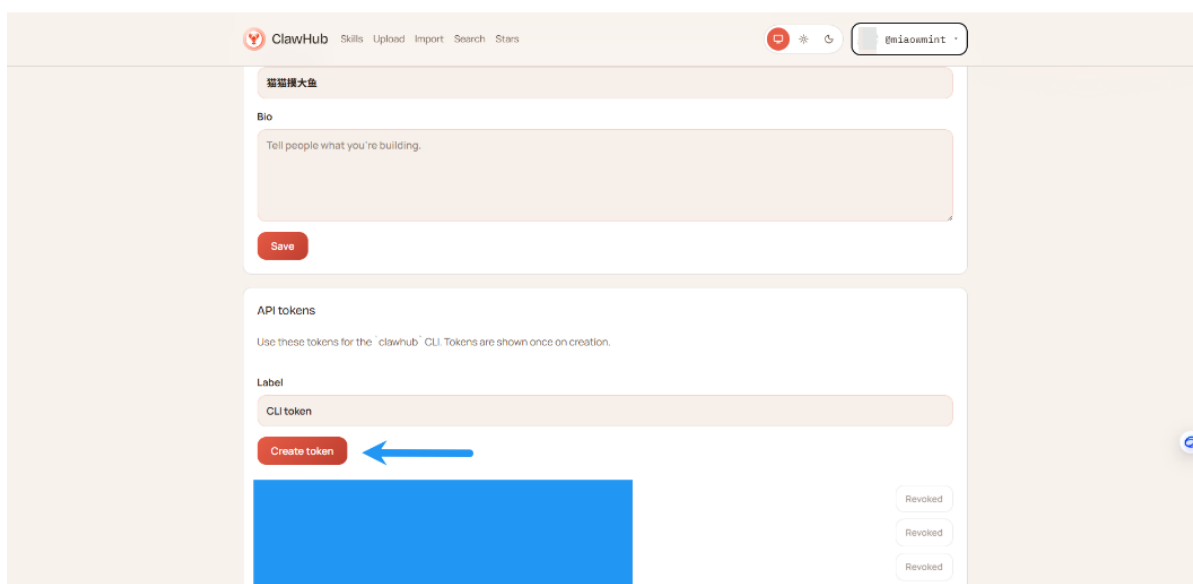

2.2 Enter Settings Page

After logging in, click your user avatar in the top right corner of the page, select "Settings":

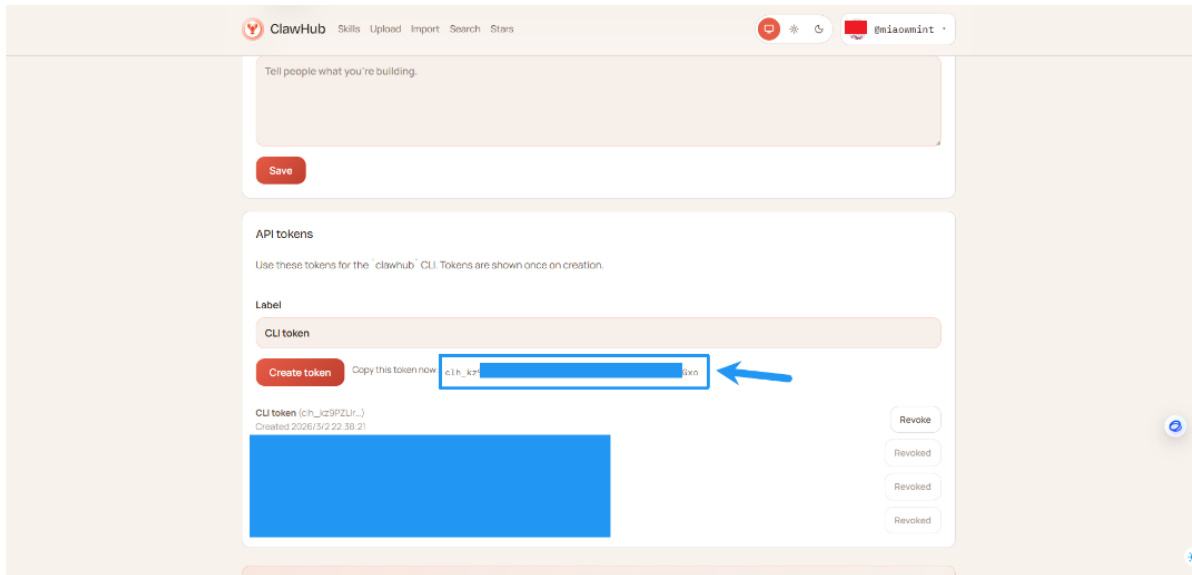

2.3 Create API Token

In the settings page, find the "API Tokens" section, click "Create token":

2.4 Copy Token

The system will generate a new API Token, click the copy button to copy this Token:

⚠ Important Notes:

- Token is only shown once, be sure to copy and save it properly
- Do not share the Token with others
- Token can be deleted at any time in the settings page

2.5 Login in Terminal

Open terminal, run the following command (replace `YourToken` with the Token you just copied):

```
clawhub login --token YourToken
```

```
root@jetson-yahboom:/# npm i -g clawhub
changed 35 packages in 3s
20 packages are looking for funding
  run 'npm fund' for details
root@jetson-yahboom:/# clawhub login --token cjh_kr...otIJc
✓ OK. Logged in as @zt...
root@jetson-yahboom:/#
```

Note: There is a space after `--token`, then paste your Token.

Common Issues

Issue 1: Login shows invalid Token

Error message:

```
Error: Invalid token
```

Possible causes:

- Token copied incompletely
- Token expired or deleted
- Extra spaces or characters when inputting

Solutions:

1. Recreate Token and copy again
2. Ensure no extra spaces when copying
3. Check if Token is complete

Issue 2: GitHub login failed

Possible causes:

- Network connection issues
- GitHub account email not verified
- Browser blocked redirect

Solutions:

1. Check network connection
2. Confirm GitHub account email is verified
3. Try using other browser or incognito mode

Issue 3: Still rate limited after login

Possible causes:

- Login not effective
- Using wrong CLI (clawhub vs skillhub)

Solutions:

1. Run `cclawhub whoami` to confirm login status
2. Confirm using correct CLI command
3. Login again

Quick Start

Using Original ClawHub

1. Install CLI (see previous section).
2. Search for what you need: (VPN required in China)

```
cclawhub search "find"
```

```
root@jetson-yahboom:~# clawhub search "find"
find Find (3.671)
fd-find Fd Find (3.478)
skill-finder-cn Skill Finder CN | Skill 查找器 (2.512)
findfilepath findfilepath (2.202)
hib-finder HIB Sponsor Finder (2.138)
everything-find-files Everything 文件搜索 (2.046)
grant-finder Grant Finder (1.876)
feishu-doc-finder feishudoc (1.590)
swiftfindrefs swiftfindrefs (0.915)
local-image-search Local Image Search (0.767)
root@jetson-yahboom:~#
```

3. Install a Skills:

Syntax: `clawhub install <skill-slug>`

```
clawhub install find
```

4. Start a new OpenClaw session to load new Skills.

Using SkillHub (For Chinese Users)

1. Install SkillHub CLI:

```
npm i -g skillhub
```

2. Search for what you need:

```
skillhub search "find"
```

3. Install a Skills:

Syntax: `skillhub install <skill-slug>`

```
skillhub install find
```

4. Start a new OpenClaw session to load new Skills.

Agent Common Workflows

Search Skills

```
clawhub search "postgres backups"
```

Or use SkillHub:

```
skillhub search "postgres backups"
```

Download New Skills

```
clawhub install my-skill-pack
```

Or use SkillHub:

```
skillhub install my-skill-pack
```

Update Installed Skills

```
clawhub update --all
```

Or use SkillHub:

```
skillhub update --all
```

Backup Your Skills (Publish or Sync)

For a single Skills folder:

```
clawhub publish ./my-skill --slug my-skill --name "My Skill" --version 1.0.0 --tags latest
```

Scan and backup multiple Skills at once:

```
clawhub sync --all
```

CLI Commands and Parameters

Global options (apply to all commands):

- `--workdir <dir>`: Working directory (default: current directory; fallback to OpenClaw workspace).
- `--dir <dir>`: Skills directory, relative to working directory (default: `skills`).
- `--site <url>`: Website base URL (browser login).
- `--registry <url>`: Registry API base URL.
- `--no-input`: Disable prompts (non-interactive mode).
- `-v, --cli-version`: Print CLI version.

Authentication:

- `clawhub login` (browser flow) or `clawhub login --token <token>`
- `clawhub logout`
- `clawhub whoami`

Options:

- `--token <token>`: Paste API token.
- `--label <label>`: Label for browser login token storage (default: `CLI token`).
- `--no-browser`: Do not open browser (requires `--token`).

Search:

- `clawhub search "query"`
- `--limit <n>`: Maximum number of results.

Install:

- `clawhub install <slug>`
- `--version <version>`: Install specified version.
- `--force`: Overwrite if folder already exists.

Update:

- `clawhub update <slug>`
- `clawhub update --all`
- `--version <version>`: Update to specified version (single slug only).
- `--force`: Force overwrite when local files don't match any published version.

List:

- `clawhub list` (reads `.clawhub/lock.json`)

```
root@jetson-yahboom:~# clawhub whoami
Error: Not logged in. Run: clawhub login
root@jetson-yahboom:~# clawhub list
No installed skills.
root@jetson-yahboom:~#
```

Publish:

- `clawhub publish <path>`
- `--slug <slug>`: Skills identifier.
- `--name <name>`: Display name.
- `--version <version>`: Semantic version number.
- `--changelog <text>`: Changelog text (can be empty).
- `--tags <tags>`: Comma-separated tags (default: `latest`).

Delete/Undelete (owners/admins only):

- `clawhub delete <slug> --yes`
- `clawhub undelete <slug> --yes`

Sync (scan local Skills + publish new/updated Skills):

- `clawhub sync`
- `--root <dir...>`: Additional scan root directories.
- `--all`: Upload everything without prompts.
- `--dry-run`: Show what will be uploaded.
- `--bump <type>`: Version increment type for updates `patch|minor|major` (default: `patch`).
- `--changelog <text>`: Changelog for non-interactive updates.
- `--tags <tags>`: Comma-separated tags (default: `latest`).
- `--concurrency <n>`: Registry check concurrency (default: 4).

Environment Variables

- `CLAWHUB_SITE`: Override website URL.
- `CLAWHUB_REGISTRY`: Override registry API URL.
- `CLAWHUB_CONFIG_PATH`: Override location where CLI stores tokens/config.
- `CLAWHUB_WORKDIR`: Override default working directory.
- `CLAWHUB_DISABLE_TELEMETRY=1`: Disable telemetry for `sync`.
